After interviewing several people, we learned there are many things to fix with the current application. All the users understood the tasks clearly. Most of them were very satisfied with the appearance of our application and the ease of moving the stencils to the workspace. Some of the suggestions we heard were to change the text/size in the buttons, change the cursor to a hand when we are dragging the text, have a text field specific for each component so they are lined up correctly, and being able to hit “enter” when creating the new text. We will do our best to implement all the recommendation from the users.

We also learned of some helpful new applications that are our competitors. We plan to look more into these programs and see what we can take from them. By adding more functionality and listening to the recommendations given, we plan to increase our rating for PostQ5, which is for the user’s to recommend to their friends. We also plan to have more people
