Not intuitively designed elements in Siebel Center

Chan Hong Min (cmin4)

9/2/2008
There is inclined path for the handicapped people but there is nowhere for them to go after coming up the steps.
Many people come down to the basement to go to the lab but the direct way is blocked and everyone has to go around.
This door seems like I have to pull the door because it has the bar but actually it has to be pushed to be opened.
There is no roof on top so all the bikes will get wet when it rains.
The table’s height is too low it is hard to use laptops or take notes when sitting down on the couch.
It is hard to see where the restrooms are when passing around the building. It’d be better if there’s a restroom sign on the ceiling.
The glasses are sticking out for no reason. It’s not pleasing to see nor it is helpful for people to move around.
An unusual place for an outlet to be!
Hard to know if it is a fire extinguisher. Transparent material or bigger sign would have been better.
It’s hard to know which side the card has to be swiped. There is a small sign but because it’s in same color and is only carved, it’s hard to know.
