Not Well Designed Objects in Siebel Center

Albert Albert [ albert2@illinois.edu ]
9/2/2008
Door between 2\textsuperscript{nd} and 3\textsuperscript{rd} Floor, this was not well designed because I don’t see any purpose for this door.
Pillar in Siebel basement, it’s not well designed because it’s in the middle of the pathway, can harm people in the case of emergency.
Outside the Siebel, there is no walkway to the path causing people to walk on the grass
One of the doors in Siebel basement, there is no handle and no description for what is inside.
One of the thermostats in Siebel, this was not well designed because pressing the button doesn’t change anything (user will need to press several button at the same time to make it works based on the information from TSG website)
Discussion Room in Siebel basement, network and electrical cable is not properly placed.
Clock is not in the correct place, several seat in the room will have difficulty to look at it. This photo was taken from one of the actual seat.
Unused Drawer in Siebel Computer Lab 0220, reducing seat width in these 2 workstations
Strange Room numbering right side 1223, 1225 left room 1228, sometimes very hard to find Professors’ Office in Siebel Centers without looking at the map.
Door without any description in First Floor Siebel Center, it’s also in red color causing people to think it’s an exit in the case of emergency.
