I just remember having the lights or temp go on the fritz once and having a hard time setting this thing and knowing that what I had done actually made a difference.

I have no idea what this is for.

So I think I’ll set my food to cook at #3… whatever that means.
This unusual room is always interesting to me. The people who sit there are supposed to answer questions and invite questions in a way. I always feel like the room quarantines the person from the rest of the world and that very few people feel welcome to venture inside.

The controls could be easier to reach. I suppose there must be a remote somewhere, but inevitably there’s going to be someone standing on a table.

This design isn’t bad in itself, but I just think that it’s interesting given the current student privacy laws. This structure is meant for leaving homeworks and quizzes for students to pick up, which violates some privacy law that we have. The law may be valid or silly, but it’s interesting that in such a new building it wouldn’t be taken into account.
Only make sense with labels that it shouldn’t need. But beyond that, what is Zone A?? Zone B?? And, there’s no “ON”/”OFF” just up down and whatever that means or does.

I’m not sure why this is separate from the other lights. It’s nice that it looks different, but it still needs a label, because it’s the only one that looks different so people will not guess that it’s a light.

In a vain attempt to organize the papers left over, someone devised a system where the date is listed at the top, and the papers printed on that date are placed below it. After four days the papers are discarded. From the numbers above you can see that without someone to change the dates everyday and move each paper over by one spot every day, the system does not maintain itself.
Something better could be done here. Just by adding a 5th column, the five days of the week could easily be represented and dates would be less important.

A roof could easily be placed over the bike parking so people don’t have to worry about wet seats.
