Figure 1: One of the many AC controls in Siebel. There is no feedback when any of the buttons are pressed. There are no instructions on the control, just a few symbols.
Figure 2: Here we have a pillar in the middle of an already small hall between Bevande and the video wall. People line up here to get food. People also use this hall to get from one side of the building to the other. However, in between classes, the line gets long and a large amount of people are trying to get somewhere, leaving a bottleneck in this area.
Figure 3: This is an image of a set of light switches in the computer lab in the basement. It is placed next to the Emergency exit door. Most people would not use these switches to turn off the lights. Also, in case of an emergency turning off the lights may not be one’s biggest priority.
Figure 4: This is the exit near 1404. There are washrooms to the right of this exit. However, unless you walk down this hallway, you can’t tell the washrooms are there. Then people end up walking to the other end of the building to use a washroom.
Figure 5: This is the north terrace on the fourth floor. There are no outlets here. There are outlets on the other terraces, why not this one?
Figure 6: This is the door to the graduate student lounge on the 4th floor. There is a door to this room on the terrace. The doors to the terrace stay unlocked. There is no reason to keep the hall entrance to the lounge locked if people can get it at anytime through the terrace.
Figure 7: On the second through fourth floors, the east side of the building has one person washrooms. The east side also has a number of conference rooms. If anyone needed a washroom, they would have to wait in line, or walk to the other side of the building.
Figure 8: The central staircase in Siebel looks interesting, but it is a pain to use. One has to walk in circles to some floors or go to the corners of the building.
Figure 9: Here, we have a very short hallway near the southwest stairwell. The hallway leads one TA office and a private access door to the academic office. The hallway get very very little traffic. However, there is a bulletin board that spans the length of the hall. Very few people actually see the what is on this board.
Figure 10: This is an image of an outlet placed in a wall in the basement of Siebel under a display case. There are no seats anywhere nearby, just a random nook with an outlet, hidden by a display case.
