Photographs of Bad Design

Anbang Xu

Figure 1. There should be a display to show what floor the elevator is on and what direction it is moving.

Figure 2. It is difficult for users to find the room number signs. For example, Room 1214 and 1404.
Figure 3. There should be a sign or display to indicate whether the restroom is occupied.

Figure 4. There are no door handles to help users to open the door.
Figure 5. The window is too small. When a user is opening the door, it is hard for him or her to find whether there is a person from the other side of the door.

Figure 6. The system needs to be updated. For example, the system cannot show a map of the Room 1404.
Figure 7. It is hard to open the office door. The users need to swipe the ICard on the lock very quickly and then rotate the door handle in time.

Figure 8. The distance between the two drinking fountains is not long enough to let two users drink at the same time.
Figure 9. The Braille is too high for blind people to touch and read.

Figure 10. The bench may hinder the disabled person from pressing the button to open the door.
