The visualization I designed is one for analyzing wall posts trend on Facebook. It is a Facebook application called “Wall Posts Analysis.” The visualization is composed of a graph with green and red diamonds. The red diamonds represent angry posts and the green diamonds represent happy posts.

You can type in the name of a different friend to analyze wall posts from that person.

There is also a scroll down menu for the year you want to view the analysis for.

This visualization can be used to analyze angry/happy wall posts as well frequency of wall posts and their lengths. The length of the posts is measure by the number of words in the post. A “word” is considered a chain of characters with spaces before and after it.
The diamonds can be clicked on, revealing details about the wall post. To signal that it has just been clicked on, the diamond becomes gray:
