Interview questionnaire

Goal: to evaluate how satisfactory the application was to the users and how smoothly the users used what they need to use to find the helper they want.

Prequestions:

age, year (freshman, sophomore, ...), gender, major, experience with iphone, how often do you ask for help?

Postquestions:

The language used in the buttons is relevant to what they do.

Modifying the list of the subjects I need help is easily accomplished.

The layout of the application is consistent throughout the process.

The information of the helper is sufficient to determine if he is the one I want.

I will use this application again when I need a helper.

Using map interface is easier than using list-based interface.

*Compared to any other tutor finding system, how useful was it? (if you had one)

*If the information about the helper was not sufficient, what information do you want?
Participant #: ____________________
