My visualization will explore a single person's email account. It will place a blue circle in the center to represent yourself. For every person who has ever sent an email to just you, there will be a teal circle connected to you with a line. Every person, not previously represented, who has sent you an email with other people either carbon copied or included in the to line, will be represented with a green circle. The green circles will be further away from the center than the teal circles. If the emails from a green circle included anyone else those people will be represented. If the included contacts have already been displayed in teal, a line will link the green circle to those people. Finally, for every contact included in an email, and who has not yet been displayed (ie, they have never sent you an email), will be displayed with a yellow circle. Lines will link these yellow circles to the people who sent the email (either a teal or green circle). Yellow circles are further away from the center than teal or green. I will try and organize the drawing so that lines do not cross.

I think that this visualization will show groupings of people. Also, you will be able to tell who in a group does not have personal communication with you. Likely this person is not as central to your needs on a team. Also, you will be able to see disconnected groups of people. These groups are probably newsgroups that you are not highly involved in, or have no personal connections with any of the members.
